

BRIGHT OLUWATOBI JOEL

Software Engineer | Full-Stack & System Architecture

Abuja, Nigeria | joelbright508@gmail.com | +234 904 052 2602 | tobijoeel.com.ng | linkedin.com/in/bright-joel-01823026b

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with a track record of architecting and shipping six production products running live on custom domains across fintech, supply chain, sports-tech, and gaming. Specialist in bridging robust backend architectures (ASP.NET Core, NestJS, Node.js) with high-performance frontends (React, Next.js, TypeScript) and real-time infrastructure. Experienced in translating complex business problems such as multi-warehouse inventory theft and automated recurring payments into secure, offline-first, scalable software. Proven ability to operate with complete end-to-end technical ownership from requirement scoping through deployment and system reliability.

WORK EXPERIENCE

Frontend Developer | Zeenom Tech (Remote)

April 2026 – Present

- Lead frontend architecture decisions, translating complex UI/UX designs into production-ready React and TypeScript applications serving active end users.
- Enforce strict performance, accessibility, and API reliability standards across codebases, reducing UI regressions and increasing engineering shipping velocity.
- Design resilient REST API integrations and state management patterns to ensure real-time user interface sync across high-traffic workflows.

Software & Machine Learning Engineer | Techy Jaunt (Remote)

April 2026 – Present

- Architect and operationalize practical AI/ML pipelines, moving models out of research notebooks into production software environments.
- Build Python-driven data preprocessing, model integration, and automation workflows to deliver scalable machine intelligence for product features.

Software Engineer (Contracts & Consulting) | Self-Employed (Remote)

January 2026 – Present

- Manage full-stack software development lifecycles for business clients, handling technical scoping, architectural design, database modeling, and cloud deployment.
- Architect custom web platforms, intelligent automation workflows, and custom API systems delivered on time to custom production domains.
- Interface directly with business stakeholders to convert operational bottlenecks into functional software requirements.

Software Engineer | HIIT Plc (Abuja, Nigeria)

January 2026 – April 2026

- Built production Python automation scripts and internal data tools, eliminating manual data handling and drastically reducing processing errors for core operations.
- Optimized routine database and data-processing tasks, reducing operational processing time for internal workflows.

Backend Engineer | Elkanah IT Technologies (Ilorin, Nigeria)

September 2024 – December 2025

- Owned REST API engineering end-to-end using ASP.NET Core, designing PostgreSQL/SQL Server database schemas, validation layers, and controller logic.
- Delivered robust CRUD modules and core business logic engines currently running live in production.
- Independently debugged and resolved production API performance bottlenecks and data validation vulnerabilities.

during code reviews.

FEATURED SYSTEMS & PROJECTS

Aziki Imports | Multi-Warehouse Stock Management System

Stack: React, Node.js/Express, PostgreSQL (Prisma), PWA, Paystack

- Engineered an offline-first Progressive Web App (PWA) tailored to solve multi-warehouse stock theft and accountability gaps in import businesses.
- Implemented a safe sync-on-reconnect mechanism backed by an immutable, append-only transaction audit log restricted to administrative accounts.
- Integrated a public storefront with Paystack checkout featuring race-condition-safe inventory deduction upon payment confirmation.

NombaFlow | Subscription Billing & Ajo Platform (Nomba Hackathon Lead)

Stack: Nomba API, Nomba Checkout, Nomba Transfers, Node.js, React, FastAPI

- Led full-stack development for a merchant subscription-billing platform built on the Nomba API. • Built automated recurring billing logic with failure-driven retry scheduling, tokenized card capture, and webhook notifications.
- Developed an automated Ajo (rotating savings) engine that auto-transfers payout funds to designated beneficiaries via payment APIs.

CampusArena | Multi-Campus Gaming & Infrastructure Platform

Stack: Next.js 14, NestJS, PostgreSQL, Redis, Socket.io, Expo (React Native)

- Architected a distributed gaming ecosystem serving university students across 200+ Nigerian institutions. • Built real-time WebSocket game servers (Chess, Whot!), a Glicko-2 matchmaking rating engine, and Redis-cached national and university leaderboards.
- Maintained a multi-repo ecosystem spanning a NestJS backend API, Next.js web portal, and Expo mobile app.

Ninety Minds | Grassroots Football Scouting Platform

Stack: React, Node.js, Cloudflare Workers, PostgreSQL

- Co-founded and built a talent discovery platform providing young athletes with digital profiles and scouting visibility.
- Shipped end-to-end messaging pipelines, club portals, player verification flows, and server-side authentication hardening.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C#, Python, SQL, HTML5, CSS3

Frontend: React, Next.js, TanStack Router, Tailwind CSS, Vite, Expo (React Native)

Backend: ASP.NET Core, NestJS, Node.js, Express.js, FastAPI, Socket.io, REST APIs

Databases & Caching: PostgreSQL (Prisma/Supabase), Redis, MySQL, SQL Server, MongoDB **Cloud &**

Infrastructure: AWS (Certified), Cloudflare Workers, Azure, Docker, Railway, Vercel, Git, Postman **AI &**

Automation: Claude API, Python Data Pipelines (NumPy, Pandas, Scikit-learn, TensorFlow)

EDUCATION & CERTIFICATIONS

B.Sc. Software Engineering | Baze University, Abuja (2026)

Relevant Coursework: OOP, Data Structures & Algorithms, Database Systems, Compilers, Software Architecture

AWS Certified Cloud Practitioner (July 2025)

Certifications: Advanced Python Programming, Full-Stack Web Development, AI & Machine Learning
